

RentHive – Smart Tool & Item Rental Network

Overview

RentHive is a community-based digital platform that enables people to rent and share items within their local area, helping reduce unnecessary purchases and save money.

Instead of buying items that are only needed occasionally—such as cameras, drill machines, tents, musical instruments, or projectors—users can rent items from nearby owners at an affordable cost. Item owners can list unused belongings to earn passive income, while renters gain access to what they need without long-term ownership.

RentHive builds a trusted sharing ecosystem through verified user profiles, secure payments, and damage protection mechanisms. The platform supports smart location-based search, allowing users to quickly find the closest available items. By encouraging reuse, RentHive promotes sustainability and reduces environmental waste.

Scope of the Project

The scope of RentHive includes the development of a secure, location-based rental platform that facilitates item listing, booking, payment handling, and dispute resolution within local communities. The system enables trust-building through verification, ratings, and deposits while supporting efficient item discovery and rental management.

RentHive acts as a facilitator between item owners and renters and does not assume ownership of listed items.
